

"Installing a Diamond Steel Roof is fast and easy. The shingles are lighter and simpler to work with. We can install over existing asphalt, so there's no mess and no added expense. Our customers are happy with the installation and even happier with the result. The competitor aren't."

-Steve, Roofing Contractor

"I installed the Diamond Steel Roof on my cottage by myself... Now all my neighbours are asking me where I got my roof. The installation was easy, the result is beautiful and the compliments, like the roof itself, will continue for a long, long time."

-Robert, Homeowner

Shingles of similar design were used on many buildings in North America from 1890-1920. Many of those roofs are still protecting homeowners' investments today!

We estimate life expectancy conservatively at 50 years, but expect nearly twice that life span!

Proudly Made in Canada

Each panel has a secure interlocking fold on all sides, a exceptional hidden clip and no exposed fasteners.

Our roofing system can be walked on without damage, since no strapping is required.

Steel doesn't burn. Our steel roof protects your home or building from airborne cinders.

The Diamond Steel Roofing System was designed and developed in 1996. We have spent years perfecting our system in order to serve the steel roofing needs in North America. Our system is water tight, long lasting and is aesthetically unique! We offer a Diamond and Rectangular panel, in 6 standard colours, as well as, specialty colours upon request. Contact us today to enhance the beauty of your home!
